

STRATHCLYDE FIRE & RESCUE

> QUALITY ASSURANCE . . .

Strathclyde Fire & Rescue were prompted to join Constructionline by the need for using an approved system that regulates building projects for Fire & Rescue. Constructionline met their needs.

Diane Codona, Senior Administration Assistant at Strathclyde explains this, 'We needed a quick and easy solution for finding contractors for our projects within a specific area, and for us to be happy in the knowledge that the company is regulated and have all of their details up to date. Constructionline provides us with these assurances'.

> REDUCING DUPLICATION . . .

The use of Constructionline for Strathclyde Fire & Rescue has meant reducing the amount of paperwork and duplication in the procurement process, and has led to lower costs and increased efficiency. Diane adds, 'To this end, procedures put in place within our organisation insist that we use Constructionline as the sole source of contractors and consultants for all of our construction projects. To be considered, suppliers need to be on Constructionline'.

Apart from saving time, Diane identifies the support of the Constructionline team as one of the key benefits from using the system, 'We have found the helpline to be very beneficial. The support from the Constructionline team in resolving queries in relation to the system has been invaluable to us. Adopting Constructionline has proven to be one of the best decisions we made'.

'For us, having a reliable and regulated source of suppliers for our projects is crucial, and we have found all this in Constructionline'.
